Standard Statement – Password Management

Title: User Logon Passwords
Document Number: SS-70-002
Effective Date: 12/14/2003
Published by: Office of the Information Technology

1.0 Purpose

Information handled by computer systems must be adequately protected against unauthorized modification, disclosure, or destruction. Effective controls for logical access to information resources minimize inadvertent employee error and negligence, and reduce opportunities for computer crime. Each user of a mission critical automated system is assigned a unique personal identifier for user identification. User identification is authenticated before the system may grant access to automated information. Passwords are used to authenticate a user's identity and to establish accountability.

2.0 Scope

This standard statement applies to all state agencies, boards, commissions and institutions of higher education.

3.0 Background

The Arkansas Information Systems Act of 1997 (Act 914, 1997) gives the Office of Information Technology the authority to define standards, policies and procedures to manage the information resources within the state. This is accomplished through work with a multi-agency working group known as the Shared Technical Architecture Team.

In addition, Act 1042 of 2001 states that the Executive Chief Information Officer oversee the development of information technology security policy for state agencies.

4.0 References

4.1 Arkansas State Government Information Resources Security Policy Guidelines
4.2 Act 914 of 1997: Authorized the Office of Information Technology (OIT) to develop statewide policies.
4.3 Act 1042 of 2001: Authorized the Executive CIO to develop security policy.

5.0 Standard

5.1 At a minimum, passwords shall be changed every 90 days.
5.2 Passwords shall be at least eight characters in length and be a mixture of alpha and non-alpha characters
5.3 User passwords shall not be reused within six password changes.
6.0 Procedures
The agency shall be able to demonstrate compliance.
